

NETWORK ASSESSMENT

Today's networks are becoming increasingly complex. No longer is being online as simple as just hosting your website and email services. Support for critical applications upon which businesses rely on have created unparalleled demands for network performance and availability.

Mobilierance offers a Network Assessment service to help you ensure that your network is operating at peak efficiency and ready to support your business requirements. The result of our assessment service includes prioritised recommendations for remediation of issues and improvements. We utilize industry best practices and proven methodology to ensure that your business has a robust but cost-effective network infrastructure.

OUR METHODOLOGY

Mobilierance's Network Assessment begins with understanding your business requirements and ends with providing you with detailed findings and prioritised actionable recommendations. A typical high-level outline will consist of the following phases:

- ◇ Review of business requirements and goals
- ◇ Review of network/system architecture, design and technologies
- ◇ Review of relevant documentation
- ◇ Risk and/or threat identification and assessment
- ◇ Performance and capacity planning/analysis
- ◇ Reliability analysis
- ◇ Design and technology option analysis
- ◇ Report and briefing

For more information and a copy of a sample report outline, please contact us for a free discussion on how our services can benefit your organisation.

Features

- ◆ Thorough evaluation of your organisation's existing network and system technical architecture vis-a-vis business objectives and requirements.
- ◆ Assessment of the current level of performance and reliability of your critical network and systems. We also assess any planned upgrades and/or roll-out of new services and systems that will make use of your network infrastructure.
- ◆ Interviews with key management and staff members to gain a clear picture of current network operations, business requirements, and challenges and issues.
- ◆ Review of current technologies in use by your organisation and analysis of appropriate technologies and solutions.
 - ⇒ Performance and reliability analysis, including optimization of the utilization of existing technology investments
 - ⇒ Technology and solutions analysis, including use of new and emerging technologies if and when appropriate
- ◆ Detailed documentation/report with prioritised recommendations and road map of remediation plan to achieve a cost-effective, right-sized robust network infrastructure.
- ◆ Presentation of assessment results and findings in both management and technical terms.
